

Let's preserve our world!

Dear Guest,

Casa Bellavista has always adopted, as much as possible, the most respectful attitude towards nature, and to the preservation of the environment, and to this end we have installed a photovoltaic system which covers our entire energy needs, and with the excess energy produced, almost completely heats the environment during the winter period, reducing Co2 emissions to more than 15.000 kg a year.

Casa Bellavista prefers to use local producers, for the most part biological cultivation, and respecting the seasons, putting into practice the philosophy of short supply chain or locally produced, both for a better expression of local cuisine, but also, and above all, respect for the environment, and by doing so, helping to reduce Co2 emissions. Even the leftovers from the kitchen are reused to produce compost, both for grandfather's vegetable garden, and for the plants and roses. Casa Bellavista also recycles tin, plastic, paper, glass, batteries, exhausted oil and medicines.

Change of bed linen and bath towels is every three days, although it is possible to have more frequent changes of bed linen and bath towels at an extra cost, but respecting the environment and our philosophy, we invite our guests to reduce to a minimum the request for this service.

To reduce as much as possible the introduction of polluted materials, we have decided to use courtesy products for the bathroom, such as hand soap, shampoo and shower gel, "rechargeable" products and not use and dispose of, with AIAB, BIOLOGICA and VEGAN OK certifications.

Confident of your support for an eco-friendly and respectful behaviour towards the nature which surrounds us, we wish you a pleasant and peaceful stay.

Simonetta & Guido
